

Aggregation switch as DHCP

Port aggregation is useful for implementing load balancing and provides a redundant link backup. To allow port aggregation, the basic configuration on all the ports must be consistent. The following list ...

Description This article describes how to create an aggregation interface 802.3ad (LACP) using two or more (if necessary) physical interfaces. Scop...

For DHCP users, enable DHCP snooping on the device to automatically generate dynamic binding entries. For users using static IP addresses, manually configure static binding entries.

The DHCP security features, such as dynamic ARP inspection or IP source guard, can still be enabled on the aggregation switch while the switch receives packets with option-82 information on untrusted ...

An Aggregation or "Top-of-Rack" switch is designed to connect everything in a rack at high speeds, then have an even bigger pipe out to the rest of the network.

In the figure below, Switch A and Switch B are peer switches in the MLAG domain and connect to each other through the peer link. Each peer switch uses the peer address to form and maintain the peer link.

In what order should I configure port aggregation on my switches? You should be certain that configuration changes are first done on the most downstream switch, and then move upstream ...

Introduction: Some TP-Link Wi-Fi products have the Link Aggregation function which can aggregate two LAN ports together at most in order to get a higher LAN speeds up to 2Gbps ...

In this example, three switches are connected by a redundant link and no extra VLANs. If any of the uplinks between the switches should fail, the redundant link is activated and provides network ...

Equipped with all-fiber ports, Aggregation Series Switches deliver up to 25 Gbps. With features such as Static Routing, DHCP Server, ACL, IGMP Snooping, STP, LAG, and centralized cloud management, ...
