

Anti-residual power distribution network automation for rail transit applications

This study presents the design and validation of a closed-loop control platform for rail transit construction. The platform integrates multi-source data, enables real-time prediction, and...

The idea of capturing the drag and rail friction components of a train along a level rail using a second-order polynomial dates back to a 1926 publication of the Railway Engineering Department at the ...

The application fulfills the requirements of a distribution code connecting small scale or mobile power stations to a distribution system. A communication link, automatic speed, power factor, and voltage ...

There is an increasing demand for the automation, intelligence and information in the operation and maintenance of urban rail transit traction power supply syst

The modular and future-proven Trainguard MT automatic train control system is Siemens' answer to the comprehensive requirements of mass transit today and offers the latest standard in automation at ...

This paper analyzes and compares the research status and technical characteristics of self-healing technology of distribution network system and rail transit power supply system, and...

The rail industry needs innovative solutions that address the challenges of growing urbanisation, climate change and other factors putting pressure on public transport. That is why we are championing the ...

The National Rail Transit Electrification and Automation Engineering Technique Research Center ("the Center") was approved and launched in 2009, accepted by MOST in 2012 as ranking the first...

ABB offers a comprehensive range of power converters and controllers designed for various applications across different industries. These products help customers generate and utilize ...

The system can effectively improve the level of rail transit operation management, enhance the capacity for safety assurance, and increase the intelligence level of information services.

Anti-residual power distribution network automation for rail transit applications
