

Blue Energy Industrial Internet

The overall combination--shipyard manufacturing, a novel architecture, and pre-certified reactors--will allow Blue Energy to drastically speed up the timelines to begin supplying clean electricity to the grid ...

Aimed at helping advance the world's first gas-plus-nuclear power plant, it could deliver a new, near-term approach to help meet surging U.S. electricity demand driven by artificial intelligence ...

By integrating mature, robust technologies and cutting edge design with a standardized and modular approach to construction, BEC will use its tidal turbines to generate zero fuel, pollution-free electricity ...

We manufacture nuclear power plants at existing fab yards and shipyards--delivering predictable cost, reliable timelines, and guaranteed performance. Blue Energy uses mature light water reactors and ...

Join us if you've spent your life in energy and are excited to lead the wave of new nuclear. Join us if you're just getting started in your career but you're motivated to push the status quo.

By building reactors in shipyards, Blue Energy says it will tame nuclear power's cost problems, giving it access to cheaper financing.

Blue Energy uses shipyard manufacturing to reduce the cost and build time of nuclear power plants.

Blue Energy Global Inc., a nuclear startup, is planning a power plant in Texas that will supply as much as 1.5 gigawatts of electricity to a new data center, initially using natural gas systems ...
