

Products / Data center / Aisle containment / Datacentersolutions / Cold Aisle Containment - Rack Freestanding

We provide the best solution to eliminate hot and cold air from mixing between aisles regardless of rack configuration and other design challenges. Whether it's live environment or new construction, ...

Adaptable to hot and cold aisle containment, the Vertiv Aisle Containment system allows you to deploy containment before or after racks are installed to simplify installation and speed deployment of new ...

Cold aisle containment systems use doors at aisle ends, ceiling panels or lids above racks, and structural frames to create enclosed zones where cold supply air flows directly to IT equipment ...

Eaton offers a wide range of partial and total containment solutions that can accommodate hot aisle containment, cold aisle containment and rack-based heat containment.

By maintaining consistent, predictable temperatures, cold aisle containment minimizes thermal stress and reduces the risk of overheating, improving reliability and extending equipment lifespans.

Cold Aisle Containment isolates the cold air, preventing it from mixing with the hot air. To enclose the cold aisle between adjustment rack rows, Aisle Containment Doors are combined with an overhead ...

Maximize data center efficiency with data center cold aisle containment curtains, the most cost-effective way to maintain optimal airflow. These curtains create a robust barrier that directs cold air from the ...

Cold aisle containment ensures that the cold air goes through the equipment exclusively, providing control over temperature. This prevents overheating in equipment, reduces the possibility of ...

These issues increase energy use and slow maintenance. Rittal's new aisle containment line solves these problems with a modular, standards-based design that integrates easily with existing racks, ...
