

Debugging a 200G Air-Cooled Switch

An optional accessory is available for debugging purposes. The ConnectX-8 Cable Extender board provides access to the MTUSB, PPS, NCSI, EN_INB_REC, and FNP interfaces, enabling debugging.

This manual's command descriptions are based on the software release 1.10. The commands listed here are the subset of commands that are supported by the DIS-200G Series Smart Switch.

Close the valves in the air-cooled chiller unit that are connected to the external environment, inject dry nitrogen into the system, and stop nitrogen filling when the system pressure reaches 10-15 bar.

In order to try to protect these engines from the 17-19 year old Privates who would be driving them an Engine Protection System circuit board was made to automatically kill the engine ...

The os-net is typically an optional network and is sometimes used early in the engineering phase to bring up the first nodes, install the OS by ssh ...

Today we are going to go from A to Z on the different form factors of GB200 and how they changed versus the prior 8 GPU HGX baseboard servers. We will break down on unit volumes, ...

Early detection helps avoid costly repairs, downtime, and regulatory compliance issues, optimizes the cooling efficiency, and prevents secondary damage to infrastructure.

The SwitchAir creates a barrier between switch air intakes and hot exhaust air in the back of server racks, while also guiding cool air from the cold aisle to the switch intakes.
