

Display breakpoint visible in the distribution box

Displays all breakpoints set in any VI that is currently in memory. This list sorts breakpoints alphabetically and contains the name of the object on which each breakpoint is set. VI ...

I want to show/hide elements on certain break points, like what I would do with Bootstrap or Zurb Foundation. I see in the documentation here [https://material ...](https://material...)

By default, every row, column, and module is visible on every device size. You can use the Breakpoint setting to hide individual rows, columns, and modules for certain device sizes. In the Global Settings, ...

To view & edit the styles for a specific breakpoint simply click on its breakpoint icon located in the center of the builder toolbar. Or via the keyboard shortcut "CMD/CTRL + B".

The display helpers allow you to control the display of content. This includes being conditionally visible based upon the current viewport, or the actual element display type.

To edit display logic, click the dropdown menu to access the choice options list and select Edit Display Logic. To remove the display logic, select Remove Display Logic.

Think of it as the distribution point where the main electrical wire comes into your home and then splits off into the various wires that service the various rooms of your house.
