The scientific theory of evolution by natural selection was conceived independently by two British naturalists, Charles Darwin and Alfred Russel Wallace, in the mid-19th century as an explanation for ...

Evolution is the process of heritable change in populations of organisms over multiple generations. Evolutionary biology is the study of this process, which can occur through mechanisms including...

This article provides a strategic and technology-focused roadmap for the evolution of optical modules from 400G to 800G, 1.6T, and ultimately 3.2T, helping data center operators make...

This article takes a deep dive into the world of optical modules, exploring their evolution from 400G to the mind-boggling 3.2T, and unpacking the cutting-edge technologies shaping their future.

Because the definition of evolution is change in the heritable characteristics of a population over generations,

evolution can occur by means other than natural selection.

Evolution, as related to genomics, refers to the process by which living organisms change over time through changes in the genome. Such evolutionary changes result from mutations that ...
