

# FTTR Splitter Selection

Learn how to choose the right fiber optic splitter for FTTH and FTTX deployments. Compare PLC splitter ratios, packaging types, and installation options.

Choosing the right FTTH Optical splitter is the first step in initiating the split level and split ratio design. In current FTTH network designs, there are two types of optical splitters: PLC splitters ...

This guide covers what optical fiber splitters are, the main types of optical fiber splitters you should know about, how to pick the right one, and how to install and maintain it properly.

d product selection. Choose a supplier that knows your environment and has manufacturing expertise that can help you choose flexible, simplified product sets. What you will find on the following pages ...

There are two main manufacturing technologies for optical splitters, each with its own advantages and ideal use cases. The choice between them depends on your application requirements.

The configuration below has individual splitters at a central location, but addresses that are typically not reconfigurable by jumpers, so this configuration is a "distributed" split.

Splitters used in a GPON system are passive (meaning they aren't powered), and bi-directional, allowing light to travel in both directions. Splitters come in 1-2, 1-4, 1-8, 1-16 and 1-32 versions. They typically ...

A practical guide to selecting the right fiber splitter based on PLC type, split ratio, and connector options.

Designing an efficient FTTH network (Fiber-to-the-Home) requires a balance between technical precision and practical deployment. At the heart of this balance are decisions about split ...

There are two main manufacturing technologies for optical splitters, each with its own advantages and ideal use cases. The choice between them ...

Learn about optical splitter split ratios (1:N, 2:N), centralized vs. cascaded architectures, and how to choose the right setup for FTTH PON networks.
