Here, we simultaneously suppressed detrimental SBS and focused the output beam in a highly multimode nonlinear fiber amplifier using input wavefront shaping. Our MMF amplifier is free of ...

In this paper, we propose a fast focusing method using binary phase-only patterns to modulate the incident wavefront and demonstrate that it is feasible to focus and scan light through an ...

Wavefront shaping enables precise control of light propagation through multimode fibers, facilitating diffraction-limited focusing for applications such as high-resolution single-fiber imaging and high ...

These results demonstrate the ability to use a standard multimode fiber patch cable as a relatively inexpensive method to modify an input Gaussian profile into a top hat and donut profile with minimal ...

How to focus light output from a multimode fiber

This article provides an overview of recent advances and breakthroughs in controlling light propagation in multimode fibers, and discusses newly emerging applications.

They appear to be using a 40mm best-form lens to collimate the output and an aspherical lens to focus it into the fibre. I suppose the Lumencor Sola uses a similar method. I will ...

Compared with a single-mode fiber, a multimode fiber allows for much easier launching of light, particularly if it supports many guided modes. For efficient launching, one has to fulfill two conditions: ...
