

How to make an elbow in a 45-degree cable tray

The assembly guide below will help the cable tray installer make the bends and others without difficulty even he had never installed wire mesh cable trays before.

In the real world, to make a 45 elbow, we need two segments, to make a 90 elbow, we need three segments I've also tried to use some geometry forms in revit but no hope...

Would someone kindly let me know the formula to create a flat 45 in say 100 mm cable tray for example. So I can then use the formula on different cable tray sizes and to different angles.
