

Laser Diode Temperature Controller

The built-in temperature controller includes a full PID feedback loop with independent P, I, and D settings, which can be individually optimized. A wide variety of temperature sensors (such as ...

Precision diode temperature control helps maintain output power and wavelength as well as prevent against over temperature conditions that can damage or prematurely age laser diodes.

The TED200C is a precision temperature controller designed to drive thermoelectric cooler (TEC) elements with currents up to 2 A. It supports almost all common temperature sensors and can be ...

TEC controllers, also known as thermoelectric controllers, are used widely in laser diode and photo-detector cooling and heating applications.

The LDTC LAB Series instruments combine best-in-class low noise, high ...

The LDTC LAB Series instruments combine best-in-class low noise, high-end digital control laser diode driver technology with an IntelliTune™ smart temperature controller.

This LDCD series of Compact Laser Diode Driver and TEC Temperature Controller is based on a proven design that have wide deployments. The module provides a low noise laser driving current up to 1A, ...

From 100 mA to 100 Amps, Arroyo Instruments' laser drivers provide precise control over the optical output while protecting the laser diode with robust safety features. Temperature stability and ...

The LDC-37X6 Series Laser Diode Controllers are an industry-leading family of high performance, microprocessor- based instruments that offer a high stability, low noise current source with an ...

With a low-noise current source, a 36 W high-precision temperature controller, and standard computer interfaces including Ethernet, the LDC500 series is the right choice for your laser diode testing and ...

Temperature controllers are designed to regulate temperature and remove heat for temperature-sensitive elements such as laser diodes. This is accomplished by either cooling or heating a Thermo ...

Laser Diode Temperature Controller
