

Microtubes for Optical Cables

Microducts are innovative, miniaturized plastic conduits designed to maximize the use of available duct space. By subdividing traditional duct pathways into smaller, organized compartments, microducts ...

As an addition to the Sirocco microduct cables family, Prysmian introduces Sirocco Unitube microduct cables. The cables, available in fibre counts from 2 to 24, are an ideal solution for customer ...

AFL OSP MicroCore[®] cable series is designed for outside plant installation in microduct conduit systems. The foundation of the design is the multi-fiber-set, gel-filled buffer tube construction. The ...

By combining the entire Solifos and Hexatronic product range, we offer one of the most extensive ranges of fiber optic cables in all of Switzerland. The offer ranges from air blown fiber to special cables for ...

Loose fiber optic cables designed with reduced diameters and very low friction (PE) jacket for blown installation in FTTH microducts.

Designed for installation in microduct systems using air-assisted installation methods, MiniXtend micro cables are up to 50% smaller than standard loose tube cables and offer high fiber counts in a small ...

Cable parameters such as cable diameter, stiffness and sheath friction are optimized for best installation performance. The cable is based on a multi loose tube construction with SZ design around a central ...

The above are the detailed knowledge points about the classification of the use of air-blown micro-optical cables. I hope that we can increase our knowledge about optical cables.

MLT Microduct optical fiber cables are robust solutions for micro duct outside plant installations. They have stranded micro loose tubes and water blocking gel, they ensure durability and reliability.

Microducts are pipes used for the installation of fiber optic cables, can be produced in different colors and have high crush resistance.
