

Based on general system structure theory, the technical system framework for the provincial power grid corporations to construct regional energy internet is constructed, and it ...

Exploration of the construction path of an energy ecosystem adapted to the power Internet of things | 2021 IOP Conf View the article online for updates and enhancements.

With the wide application of Internet technologies, cloud computing and big data technologies are gradually integrating with energy technologies promoting the c

The Internet of Energy is now possible thanks to advances in microgrid technology and machine-type communications that allow applications with ultra-reliable, low-latency, and massive ...

The benefits of the energy Internet, along with the challenges of its implementation on a large-scale distributed architecture with the inclusion of renewable energy resources, is discussed.

Given the favorable conjuncture, this paper sets the background for building the Energy Internet, while providing a transition roadmap for its actual large-scale deployment.

We're in the midst of one of the most significant transformations the energy sector has ever seen. What was once a centralized, one-way system is becoming a dynamic, distributed and ...

The journal has been selected for the High-Impact New Journal Project under the China Science and Technology Journal Excellence Action Plan. All rights reserved.

Energy Internet is an innovative concept based on synergy of multi-energy systems including electricity, gas, cooling and transportation.

On the Construction of the Energy Internet
