When the bridge and the roadway approaches are a small obstruction to the flow, and the bridge opening is not acting like a pressurized orifice, the energy-based method should be used.

With the construction of divided highways, a common modeling problem involves parallel bridges (see figure below). For new highways, these bridges are often identical structures.

In this paper, an attempt is made to simply and systematically generate strut-and-tie models for two-dimensional (2-D) and three-dimensional (3-D) disturbed or discontinuity (D) regions ...

In this study, experimental and discrete element methods were used to investigate the effects of angle of Z shape non-persistent joint on the compressive behaviour of joint's bridge area.

The parallel flanges of Z-Shapes provide excellent resistance to bending and shear forces, ensuring structural stability and load-bearing capacity. The vertical web contributes to the overall ...

The present invention relates to a Z-shaped bridge head butt plate structure, which comprises a Z-shaped butt plate main body arranged in the fill soil behind the abutment.
