

Passive Optical Device Packaging Process Solution

TO-CAN packaging offers a compact and cost-effective solution for optical devices. This technology originated in the semiconductor industry and has since been adapted for optical ...

Evaluate and characterize representative materials and test methodologies, assembly process variables and package level reliability. Develop guidelines and best practices for materials characterization, ...

Our Mission Advance Photonic Packaging and Assembly by providing scalable 3D nano-fabrication solutions for prototyping and manufacturing Enabling Next Generation Photonic Integration and ...

We provide low-loss fiber-attach technology for optical packaging of integrated photonic devices. Our novel fiber-attach technology is a 1 sec process and provides ≤ 0.8 dB loss in a fully packaged device.

Good packaging allows the chips to be used in compact, reliable devices without damage or misalignment. Photonic integrated chips have a particular advantage because they transmit data ...

Our team's world class expertise in vertically integrated photonic product design (device-module-system) and production has helped many customers prove feasibility, develop, and deploy new products for a ...

Full line of packaging products designed and fabricated all under one roof. We can provide dust-free and cleanable packaging solutions suitable for highly-sensitive environments and cleanrooms. We are full ...

PHIX can provide packaging solutions for all maturity stages of your technology. Our standard package types, a cross-section of which is listed in section 8, support a wide scope of application domains and ...

Discover HOPP micro-optical packaging technology for ultra-compact optical modules with micron-level precision and extreme durability.

Data centre interconnection has become a significant area of research in optical communications, with optical transceivers playing a vital role in optical communication systems. In ...
