

Relay Protection Analyzer

The CMC 356 is the universal six-phase testing solution for all generations and types of protection relays, where highest versatility, amplitude and power are required.

Join thousands of companies around the world using SMC for testing substations and protection relays, with more than 60 representatives and distributors worldwide.

KFA310 enables comprehensive and precise testing of solar PV systems -- from POI protection relays and anti-islanding functions to inverter grid-support and power quality devices -- ensuring safe, ...

Verify that your protection relays operate correctly when faults occur. Megger's smart relay testing solutions and expert support help you validate protection performance, improve system ...

Megger's advanced relay software simplifies protection testing with built-in routines for digital and electromechanical relays from global manufacturers. Automate test plans, reduce errors, and boost ...

The Relay Protection Tester Analyzer ensures critical power systems function safely and reliably. This specialized device functions to test and analyze protective relays, which are systems ...

Doble offers a comprehensive line of diagnostic equipment and software solutions for the verification of system protection. Our solutions allow you to challenge any protection and control ...

Knowing how to design relay logic to be simple, effective, reliable and serviceable is the specialty of PSA. PSA also offers customized templates to help customers change settings quickly, easily and ...

A protection relay tester is a specialized device used to check, calibrate, and analyze protective relays in power systems. These relays are the first line of defense--they detect faults, ...

Launch's Relay Testers provide precise secondary injection testing for protection relays and circuits. Verify CT/PT ratios, timing characteristics, and relay logic with industrial-grade accuracy.
