Cable tray length is selected based on the load to be supported, the distance between the supports (also referred to as the span), and handling and installation constraints.

Trays shall be supported at a maximum span of 2.5m by trapeze, wall, floor or channel mounting methods and will not exceed maximum loads as specified by the manufacturer.

Wire mesh cable trays are made by compounding wire cable conduits with horizontal wires running vertically every 100 mm and vertical wires running horizontally every 50 mm.
