

# Telecom fiber optic router is garbage

No, throwing your old router in the trash is not recommended. Routers contain electronic components that can leach harmful chemicals into the environment and contribute to e-waste.

Telecom equipment contains metals, circuit boards, plastics, and fiber materials -- many of which can cause serious harm if dumped in landfills. Components like solder, coatings, and wiring ...

Most likely, the issue started because of the ISP changing some settings or a new firmware update. See if this helps: [Fix unstable connection when connected to the Deco network ...](#)

A discussion of fiber optic cable and uses and implementations in our lives. Specifically fiber used for internet.

Even if the ISP's router matches the specs for a store-bought one worth the monthly rent, you'll walk home with a better kit that offers more personalization and control.

We process scrap materials like copper and fiber-optic telecommunications wire, dismantling, sorting and baling materials by commodity for resale or recycling. When asset waste ...

If your router is still in working condition, you can donate it to Goodwill, Salvation Army, or another non-profit organization that will take it. You can also see if a local school or church will take it.

By following these steps, you can ensure that your old router is disposed of in an environmentally friendly manner, while also protecting your personal information. Let's dive deeper ...

Is your business holding on to outdated routers, switches, or phone systems? Learn why recycling telecom and networking equipment matters and how Colt Recycling can help.

Telecom equipment often stores sensitive business data that must be securely destroyed to prevent unauthorized access. At TDR Recycle, we offer both logical and physical data destruction services to ...
