

## The secondary distribution box has no ground wire

It's a self grounding device (meaning if the box is screwed into any grounded box, the device will be grounded) so you could just cap that device ground wire off with a wire nut.

o A properly wired 120/240-volt subpanel includes a 4-conductor feeder; o Two of these lines are ungrounded conductors, commonly known as "hots;" o One line is the grounded conductor, ...

Ground your subpanel safely! Learn how to properly ground sub-panel equipment from a main panel. Understand NEC-compliant wiring for your subpanel.

Learn what the NEC says about ground rods on subpanel boxes. Understand detached vs. attached building rules to ensure safety and code compliance. Read more!

All the ground wires bond back at the main panel together with the neutrals. The sub panel neutral bar or terminal should not be bonded to the enclosure or the ground of the sub panel.

I found that the secondary panel only has three wires coming in and it appears to be two hot and one ground. My question is why is there no neutral wire coming in or is the service wire not ...

If there is no second ground source available for the sub-panel, then a ground wire may be run from the Main Panel to the Sub Panel and used as a second source of grounding.

Gas lines are explicitly forbidden because current flow can accelerate corrosion or create a fire hazard. Relying only on a mounting screw into a non-metallic box provides no grounding path ...

I just ran across this today and the customer has a 60 amp 3 wire sub panel to a garage with no ground, but has a ground rod and a 6 solid and no bonding screw.

All the existing white neutral wires and their grounds are connected to one bus bar, which is connected to the ground rod wire. There is no ground bus bar present.
